seed nutrient
dressing

Contains nutrients to support seed germination and root growth.

DIRECTIONS FOR USE: READ THE ENTIRE LABEL BEFORE USING THIS PRODUCT.

SHAKE WELL BEFORE USING. Apply once before seeding as a seed nutrient dressing to wheat, canola, corn, barley, oat, flax, sunflower, and vegetable seeds at the rate of 4 ml / kg of seed. Seed coating can be done simultaneously with Active PRIME™ and compatible agrochemicals. If using Active PRIME™ without additional agrochemicals, dilute with water (1:1 ratio) to ensure uniform coverage of seeds. Calibrate equipment to release the required amount of Active PRIME™ and other agrochemicals based on seed flow rate. Thoroughly mix seeds with the Active PRIME™ (and other agrochemicals) mixture. A coloring additive allows a visual check to ensure all seeds are uniformly coated. Allow treated seeds to air dry for 5-10 min before seeding. Application rates exceeding recommended rates can negatively effect seed germination. Always follow label directions.

Use this product on the basis of soil and tissue analysis in accordance with recommendations of a qualified person or institution or apply according to recommendations in your approved nutrient program.

COMPATIBILITY: This product is compatible with most fertilizers, and pesticides. If compatibility is uncertain, conduct a jar test prior to use. Keep agitator running while mixing.
